Evolution de l'antibiorésistance chez les bactéries majeures en productions bovines, porcines et aviaires en Belgique.

Nadine Botteldoorn, DGZ
Marc Saulmont, ARSIA asbl

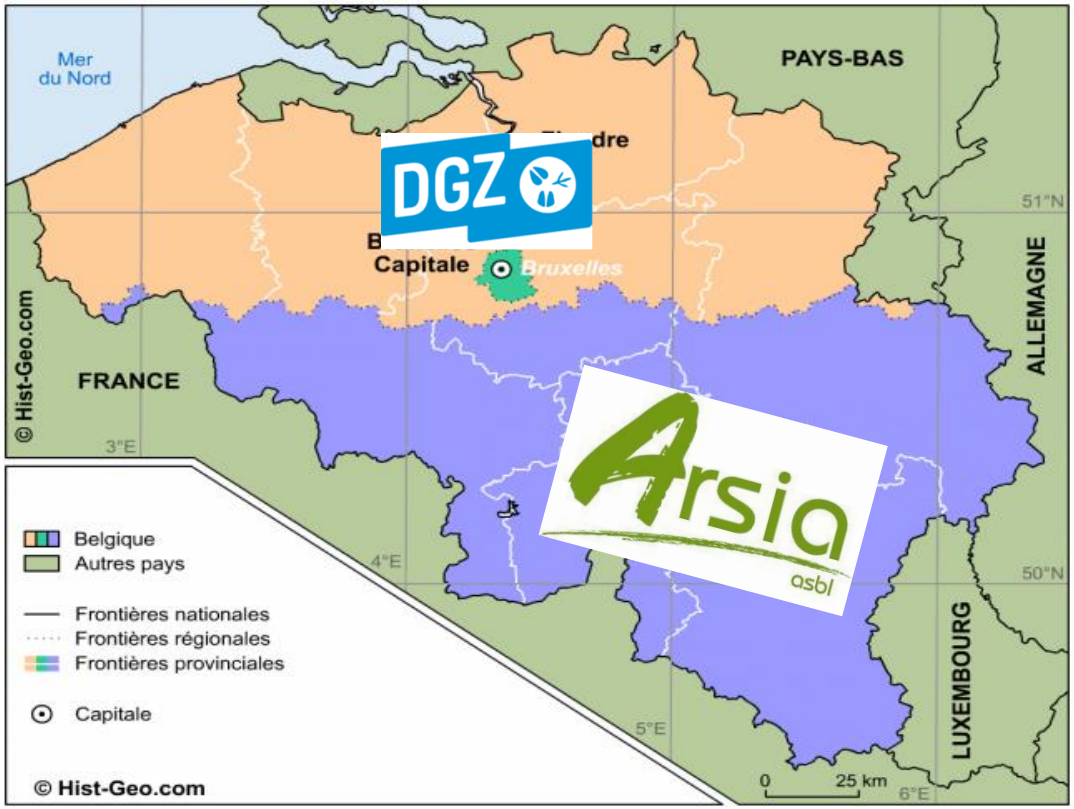
Amcra, 22 juin 2021

Sommaire/plan

- Introduction/ Inleiding
- Evolution chez les porcs/ Evolutie bij varkens
- Evolution chez les Bovins /Evolutie bij rundvee
- Evolution chez les Volailles/Evolutie bij pluimvee
- Les chiffres de MCC/ cijfers van MCC
- Conclusions/ Conclusies

Laboratoires régionaux de première ligne

DGZ: Dierengezondheidzorg, Vlaanderen



ARSIA asbl: Association régionale de santé et d'identification animale, Wallonie

Méthode

- Uniquement antibiogrammes en diffusion sur gélose
- Norme AFNOR UN 47-107
- Référentiel CA SFM vétérinaire
- Sous accréditation

Aantal	236	234	378	449	381	297

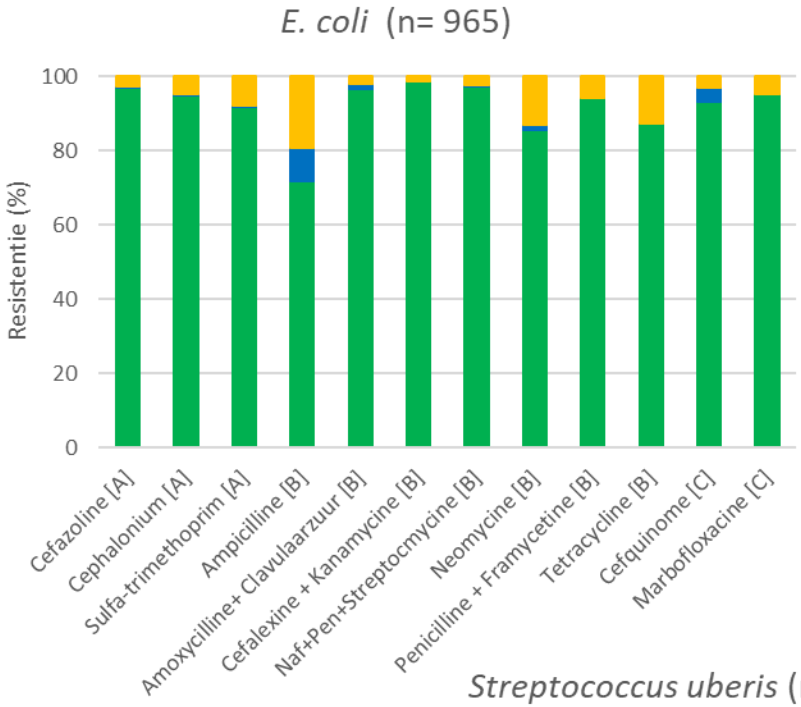
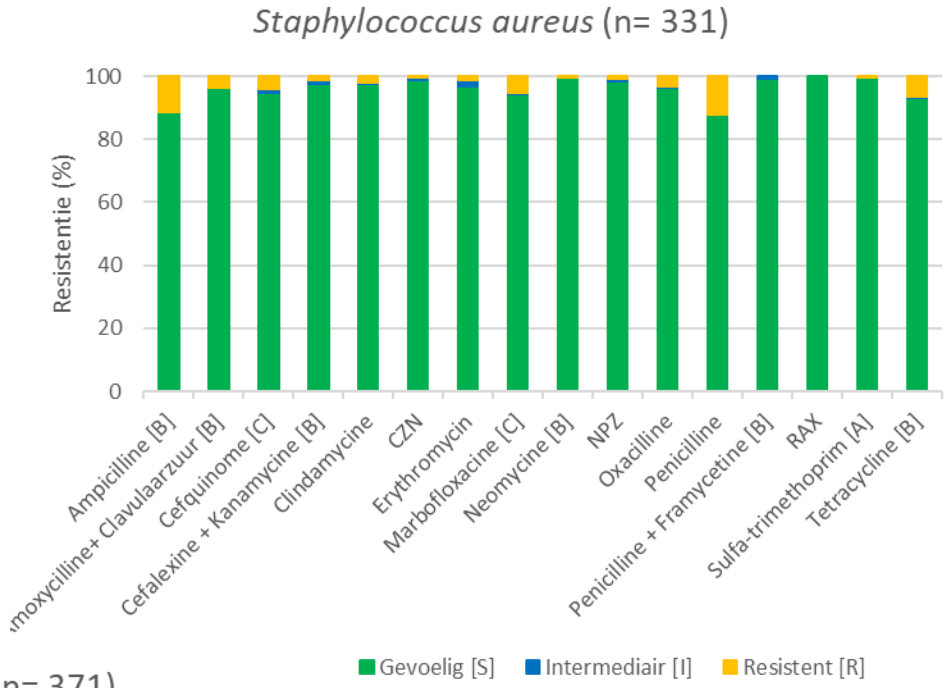
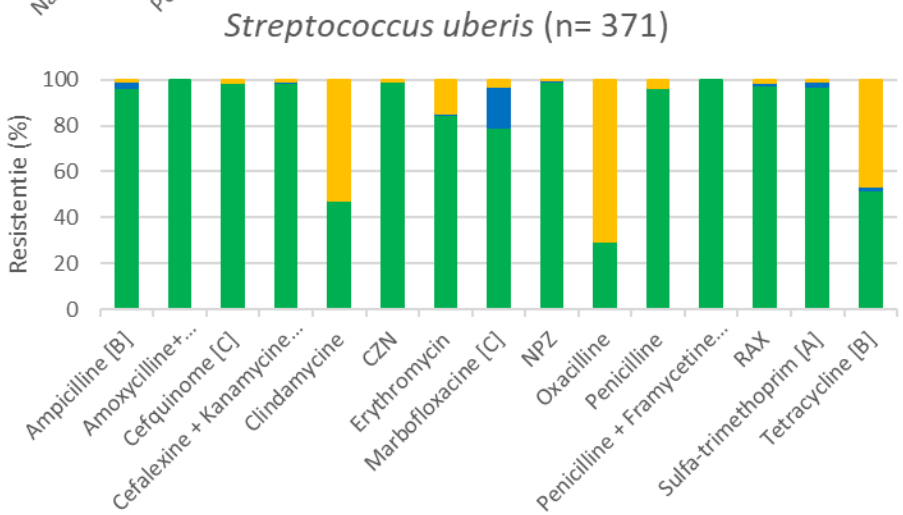
Klinische mastitis *data 2019*







Resistentie bij *E. coli* en *S.aureus* is laag
Bij *S. uberis* hoge resistentie tov clindamycine, tetracycline en oxacilline
Stabiele trend

Conclusies

Het aantal aanvragen om een antibiogram aan te leggen is gestegen sinds de publicatie van het KB

- Cephalosporines: dalende resistentie gezien bij varkens, rundvee, uitgezonderd bij kippen
- Fluoroquinolones: een dalende tot stabiele trend in resistentie bij varken, rund en kippen
- Andere antibiotica: geen grote shiften op te merken eerder een stabiel patroon aan resistentie
